

Afterword. A STRANGE REALITY

To conclude I would like to go a little further in strengthening the ground under the mind's feet. There is so much in Transurfing that seems incredible that alas, one has to keep explaining to the mind that it is all indeed real.

Whatever model had been chosen to serve as a foundation for Transurfing, its principles would still be valid. In other words, *all the principles included here are invariant in relationship to the model*. The key principle expresses the idea that the energy of our thoughts not only has an indirect influence on our physical reality but a direct impact too. The formal line of science still refuses to acknowledge this phenomenon because so far experimental testing has yielded ambiguous results. Regardless, you and I need to solve our problems now and cannot wait for the scientists to give their word of approval.

We are all aware that the world is subject to the laws of causality in which every effect has its cause. Cause is usually understood to mean some kind of action. The problem is that thoughts are usually perceived as an instruction to a subsequent action and not as the transmission of a physical energy capable of influencing the world around us. Nonetheless, the facts are stubborn and will eventually have their way.

The unexplained phenomenon of outer intention has not been totally ignored by science. Carl Jung the great Swiss psychiatrist carried out research into phenomena linked to the interaction between thought and material reality. Jung analyzed hundreds of curious instances which appeared to be unaccountable coincidences with no visible cause. Jung defined this kind of coincidence "synchronicity". In his lecture "On Synchronicity" he provides a classical example from his personal practice.

"On April 1, 1949, I made a note in the morning of an inscription containing a figure that was half man and half fish. There was fish for lunch. In conversation someone mentioned the custom of making an "April fish" of someone. In the afternoon a former patient of mine whom I had not seen for several months showed me some impressive pictures of fish. In the evening I was shown a piece of embroidery with sea monsters and fish in it. The following morning I saw a former patient who was visiting me for the first time in ten years. She had dreamed of a large fish the night before. A few months later when I was using this series in a larger work and had just finished writing it down I walked to a

spot by the lake in front of the house where I had already been several times that morning. This time a fish about a foot long lay on the sea wall. I had no idea how it could have got there.”

I cannot resist citing another extract from Jung’s lecture about a principle you will learn more about later. Jung writes: “I could tell you a great many such stories which are in principle no more surprising or incredible than the irrefutable results arrived at by Rhine (with reference to the experiments involving extrasensory perception, for example, card guessing. – *Author’s note*), and you would soon see that almost every case calls for its own explanation. But the causal explanation, the only possible one from the standpoint of natural science, breaks down to the psychic relativization of space and time, which together form the indispensable premises for cause-and-effect relationships.

My example concerns a young woman patient who, in spite of efforts made on both sides, proved to be psychologically inaccessible. The difficulty lay in the fact that she always knew better about everything. Her excellent education had provided her with a weapon ideally suited to this purpose, namely a highly polished Cartesian rationalism with an impeccably “geometrical” idea of reality. After several fruitless attempts to sweeten her rationalism with a somewhat more human understanding, I had to confine myself to the hope that something unexpected and irrational would turn up, something that would burst the intellectual retort into which she had sealed herself.

Well, I was sitting opposite her one day, with my back to the window listening to her flow of rhetoric. She had had an impressive dream the night before, in which someone had given her a golden scarab – a costly piece of jewellery. While she was still telling me this dream I heard something behind me gently tapping on the window. I turned round and saw that it was a fairly large flying insect that was knocking against the window-pane from outside in an obvious effort to get into the dark room. This seemed to me very strange. I opened the window immediately and caught the creature in the air as it flew in. It was a scarabaeid beetle, or common rose-chafer (*Cetonia aurata*), whose gold-green colour most nearly represents that of a golden scarab. I handed the beetle to my patient with the words, “Here is your golden scarab.” This experience punctured the desired hole in her rationalism and broke the ice of her intellectual resistance. The treatment could now be continued with satisfactory results”.

About half an hour after I had been considering whether to include Jung’s beetle in the text as an example, a Wanderer of quite impressive appearance flew in through the window. It was a beetle similar to the one described above. You

may or may not believe me, but I have to confess that I was not at all surprised by the rare visit. It is not that I am so used to the phenomena of synchronicity that they no longer catch my attention. On the contrary, absorbed in my own thoughts I did not attribute any meaning to it at all. I automatically let the beetle out of the window so that it would not have to look for its way out. It was not until a little time had passed that it suddenly struck me: I am such an idiot! Every time outer intention announces its presence I am still wide-eyed with amazement. They were tugging at me with all their might trying to show me a sign whilst I was in a deep, deep waking sleep. If I was at all superstitious I would have taken it to be a sign from above. You can imagine how other people are also living life asleep and fail to notice the manifestations of outer intention.

There are many more examples like this. From the point of view of Transurfing the situation is quite clear. In isolated cases visualisation generates a strong gust of the wind of outer intention. However, Jung did not rush to make any final conclusions concerning the reason for such coincidences; whether thoughts caused the event or thoughts arose as a result of a subconscious premonition of the event. On the one hand Jung states that “thoughts create the foundation for a series of chance events” and on the other hand “I sometimes cannot get away from the idea that there is a certain premonition of the onset of a series of specific events”.

In his work “Synchronicity: An Acausal Connecting Principle” (1960) Jung defines synchronicity as “the simultaneous occurrence of a certain psychic state with one or more external events which appear as meaningful parallels to the momentary subjective state”. Jung hesitated for a long time about whether to publish his work because the phenomenon of synchronicity was inconceivable to traditional scientific thinking.

Jung makes a vague and yet, according to the standards of traditional science, relatively bold conclusion. “Synchronistic phenomena prove the simultaneous occurrence of meaningful equivalences in heterogeneous, causally unrelated processes; in other words, they prove that a content perceived by an observer can, at the same time, be represented by an outside event, without any causal connection. From this it follows either that the psyche cannot be localized in space, or that space is relative to the psyche”.

There is no contradiction of the law of causality in the phenomena Jung is describing. There is always a cause, it is just that the interaction dynamics between thought and environment remain elusive to our current understanding. Which is the *cause* in synchronistic coincidences? Are events shaped by

thoughts or do thoughts arise as the premonition of an event? From the point of view of Transurfing both explanations are acceptable. The heart has access to data held in the information field which can then be interpreted by the mind. The mind in turn shapes thoughts which, under the condition of unity of heart and mind, can be manifest as physical reality. These tenets lie at the very core of the Transurfing model. However, I should emphasize once again that the alternatives model does not claim to serve as a detailed description of the world. Instead it represents a benchmark, an aid for the comprehension of certain principles. We still know very little about the world we live in, but this need not prevent us from applying the Transurfing principles. The fact that the principles work is for you to discover.

All phenomena related to the impact thought energy has on the surrounding world can be substantiated by the well-known theorem put forth by the quantum physicist John Bell. The theorem sounds: "There are no isolated systems; every particle in the universe is in "instantaneous" (exceeding the speed of light) connection with every other particle. The entire System, even if its parts are separated by huge distances, works as a Unified System". This theorem has been theoretically proven and is already substantiated on a practical level. Despite the fact that "instantaneous" connection contradicts the special theory of relativity which claims that energy cannot move faster than light, the theorem has its place.

It would seem then that outer intention fails to conform to the theory of relativity. In general, quantum physics is all based on unproven postulates, which means that it too represents a specific kind of model. And there is not just one inexplicable contradiction in the world of quantum physics but many, which once again confirms, that undue significance should not be attached to any one particular model. It should be noted that Jung's ideas have found support among the very founders of modern physics, such as Wolfgang Pauli and Albert Einstein. In addition, it is quite probable that the process of information exchange does not have anything to do with energy at all, which is why it can take place faster than the speed of light.

The alternatives model is not without its own contradictions, but nonetheless, it succeeds in explaining many aspects of reality. The alternatives model may not totally resolve certain known paradoxes of time and space but it does at least "iron out a few of the creases". Until now we have been looking at the transitions from one life line to another in synchronicity with time. Life lines have always existed in parallel to the temporal axis. In other words, the

transition is always made from one point in time to the exact same point.

Imagine if two life lines existed that were not parallel to the time axis. A projection of the same point from the two lines onto the time axis would show the points in different places. The transition between them would indicate a shift in time into the past or the future depending on the direction of the obliquity. The relative steepness of the declination would define the extent of the time difference between the two points.

By analogy, if two life lines were not parallel relative to the space axis the transition through space from one point to the other would happen instantly (or at least at an unbelievable speed). The steepness and direction of the gradient would determine the distance and direction involved in the shift. This is obviously a very rough explanation but sufficiently acceptable to the relevant context.

The painstaking Reader will no doubt object: but what about the paradox, the contradiction of cause-and-effect relationships in time travel? Suppose I went back in time before my birth and... brutally murdered my parents. How then did I come into the world? Within the framework of the alternatives model this is only a seeming paradox. I cannot be born into that same life line but so what? I can be born into a different life line. You may recall that there are an infinite number of life lines – alternatives where I both exist and where I do not exist. The most bloodthirsty paradox lover could even return to their childhood, meet with themselves and do away with the innocent creature. In this scenario the reader would not be meeting with their actual self but with a separate realised alternative which exists along with endless others.

The past cannot be changed because it has already happened. It happened not only because a past section of a life line was realised but because the alternatives of those past events already existed. In this sense you could say the same thing about the future; that it has already happened. And so cause-and-effect relationships are not contradicted in the phenomenon of the shift from one life line to another. You could cross out one of the frames in a film roll but it would not damage any of the others frames. Time is static. It is only the realisation of potential life line alternatives that has the quality of dynamic change. The force for realisation moves across life line alternatives in the same way as the circle of light from a torch moves across forest trees in the dark.

It is however possible to travel into the past or the future on one and the same life line and here we do come across a paradox. Is this not why the predictions made by clairvoyants are only approximate and often quite simply inaccurate?

Clairvoyants are somehow capable of scanning fragments of the future. If these scanned fragments are part of other life lines then it is easy to explain the element of error in their predictions. The alternatives model has it, that the greater the distance between one line and another, the greater the difference in the scenery.

Scientists are also baffled by the movement dynamics of UFOs. They accelerate instantly, then stop or make sudden changes in direction at right angles. Given the quality of inertness this type of movement pattern is impossible to say nothing of the huge stress it would cause to the inhabitants of these devices. From the point of view of Transurfing there is nothing supernatural about these phenomena. Aliens do not experience physical stress because UFOs do not fly like an aeroplane or space shuttle. It is probable that what we are observing is not so much the movement of the object, as its realisation at different points in the alternatives space.

Much remains unclear to us in questions relating to the heart and mind. Materialistic science presents the world as if it were a mechanical system. In other words, matter is primary and determines consciousness. However, in the light of recent achievements made by the same area of science this model is increasingly losing its position of authority. The substitution and review of scientific models will be an ongoing process all the while that man erroneously believes himself to be capable of penetrating to the very essence of the laws of nature. A simple hen could equally well express its preferred concept of the creation, construction and development of a poultry farm. Man stands a rung higher than a hen in his intellectual evolution but that does not bring the infinite complexity of the world any closer. Man is not meant to know and understand everything.

The pendulums of science and religion that claim to represent the last instance of truth have won their dominance not so much on account of a correct interpretation of the truth as on account of the fact that they have successfully persecuted their dissidents. The constant conflict exists not only between the pendulums of science and religion but also between individual branches within the same pendulums. The battle is ongoing and it is a battle not for the truth but for adherents.

When I was substantiating the mind's inability to store all information I based my argument on the model of imagining information in the form of computer bytes. However, this particular model could turn out to be incompatible with the neural activity of the brain. Who knows how information is really stored?

Imagine, how would a scientist have researched a television or radio if they were born in an age prior to the invention of these devices? They would have tried pushing buttons, removing various parts and watching for changes on the screen. Not having any idea how a TV works and basing their findings on the results of “scientific” observation the scientist would have come to various conclusions at the root of which would stand one seemingly undeniable fact: a television generates all these different programmes by itself. They are born right there in the transistors and micro circuitries.

This is roughly how adherents of the mechanistic model explore the human brain. It is true that damage to individual areas of the brain can have a predictable impact on a person’s perception and cognitive ability. The functional principle of the human intellect however remains a mystery and yet these adherents conclude that matter and nothing else determines consciousness. Conservative followers of the mechanistic model proudly refer to themselves as scientists and declare haughtily that their science is the true science based on factual information and not the speculations of amateurs. Anything that fails to fit the theory is declared anti-scientific and is not only rejected by made the object of persecution. Fortunately, the number of scientists of this nature is dwindling.

You may agree or disagree with the information shared in this text; either way, remember that is it just a model. No-one can say exactly how things really happen. The mind tends to negate anything that does not fit into its context of sensible explanations. Until the mind is convinced of the rational nature of knowledge it will never allow it to be integrated into the worldview template. Transurfing works. Of that there is no doubt, but to apply it the mind must have its explanation.

The alternatives model gives us the benefit of some solid ground beneath our feet but no more than that. It remains nothing more than a diagram that could be transformed into a more sophisticated model. For example, you could get rid of the assumption that so-called life lines exist which would make the early part of the book easier to understand. This would transform the alternatives space from discrete to continuous. There would no longer be any paths through the forest. Only the forest would remain. Yet this would not change the essence of Transurfing. No matter what the model is, it can only ever provide an approximate, more or less adequate reflection of reality. The path of studying reality is an eternal as the diversity of natural phenomena is infinite.

You may have noticed that the Transurfing principles overlap with the

principles of similar teachings. There is nothing strange about that. Any teaching is relatively insular and represents an autonomous model. However, given that we are all people with roughly the same quality to our worldviews different models will have certain aspects in common. To ask which of these many models provides a more adequate description of the world is pointless. The only thing of any significance is the practical results one can achieve from any given model.

You could take mathematics for instance. Different branches of mathematics represent separate models which describe material realisation. A physics problem can be solved in different ways depending on the mathematical apparatus applied. There is no point in arguing whether analytical geometry or differential calculus is better in either case. You can only choose which particular approach you prefer. You too must make your choice.

The Intention of the Ancient Magicians

In conclusion I would like to align myself with the intention of the ancient magicians. By this I mean the Knowledge keepers who lived in our reality until the break-up of the civilization that existed before this one. Fragments of this Knowledge have been preserved to this day in the form of isolated esoteric teachings and practices.

There is information to suggest, although not yet proven, that certain ancient magicians shifted into a different reality and at this time are trying to pass their Knowledge to humanity by transcendental means.

Until recently I would have treated claims like these with more than a healthy level of scepticism. Yet over the past few decades there have been an increasing number of cases where people in different parts of the world have independently put forward similar interpretations of the same Knowledge. Now I too have come into intimate contact with this same type of knowledge, which, as I said, I could never have made up myself.

I cannot say with confidence whether the Guardian (the meeting with whom I described in the first chapter) exists, at least in our reality. Having said that, I do have plenty of reason to suppose that he does in fact exist.

I have come across many different characters in dreams but they had absolutely no effect on my highly conservative worldview. My meeting with the Guardian not only turned my worldview upside down, it turned my life around.

Suddenly, for no particular reason a former physicist showing no previous

signs of aptitude started to write books. It would be too incredible and extravagant to accept that the motivation for all this was a run of the mill dream.

The Guardian never appeared to me again after that first meeting although sometimes it seems to me that I can feel his presence. Either way, I have never considered Transurfing *my own Knowledge*.

I am just a repeater tuned into the corresponding area of the alternatives space. I do not consider the work to be my own merit although I must confess I found it extremely difficult to express and systematise the Knowledge of Transurfing. It is one thing to learn something but quite another to be able to talk about it.

You too will not only learn about this Knowledge, you will assimilate it, for having devoured the book in one go you will not have received Knowledge so much as an awareness and adeptness. These are different things!

Transurfing offers quite concrete methods for turning your dreams into reality. This might not be enough for some people. If you are looking for tricks that can be spelt out like the procedure for tying a tie you could spend your life searching in vain. Creating your own fate cannot be reduced to a simple rule that goes: “step one, two, three”.

Transurfing cannot be reduced to a technique of executing certain moves. *It is not about technique but about becoming aware of your inner freedom and the feeling that you are master of the layer of your world.* Once you experience that feeling everything will unfold of its own accord without the need for any particular technique.

In order to achieve this level of awareness you have to make Transurfing a way of life. There is no other way. It is not at all laborious or burdensome. It is actually quite entertaining like playing with a mirror.

The world is a mirror of your relationship to it only with a delayed reaction. By comparing your relationship to the world with the subsequent reaction of the mirror you teach your mind a simple truth and yet one that is difficult for one's consciousness to truly assimilate: *You shape the layer of your world with intention.*

It is also essential to become comfortable with the simple but strange truth that you do not need to be concerned with the means and ways of achieving the goal. One fundamental principle lies at the foundation of this statement: *the focus of intention determines the vector of the alternatives flow.*

All you have to do is maintain the focus and let the alternatives flow takes its course. The means of achieving the goal will present itself. You cannot and need not know exactly how the goal will be realised. *Whatever happens, if you keep*

your target slide in mind and observe the principle of coordination the alternatives flow will carry you to your goal. Such is the law.

GLOSSARY

Importance

The energy of importance becomes present when disproportionate meaning is ascribed to something. Importance is pure excess potential and is eliminated by balanced forces creating problems for the person generating the potential. There are two kinds of importance: *inner* and *outer*.

Inner or personal importance manifests when a person over-estimates their own virtues or shortcomings. The form of expression for inner importance sounds: “I am an important person”, or “I do important work”. When the arrow on the importance measure goes off the scales balanced forces come in and take things into their own hands. The “hot shot” then receives a good slap. Once balanced forces come into play disappointment also awaits the person whose work is so phenomenally important. Either there will turn out to be no demand for their work or the quality of the work will be shoddy. The other side of the coin is when a person self-deprecatingly downplays their own virtues playing smaller than they really are. In both cases the magnitude of excess potential produced is the same. The difference is only in the polarity expressed.

Outer importance is also artificially created when a person attributes excessive meaning to an object or event in the outside world. The form of expression for outer importance might sound: “Such and such is extremely important to me” or “it is extremely important to me to do such and such...” This generates excess potential which ruins everything. Imagine having to walk along a log lying on the ground. Nothing could be simpler. But what if you had to walk along the same log placed across the roofs of two high-rise buildings? The short stroll would become extremely important to you and there would be nothing you could do to convince yourself otherwise.

Wave of fortune

The wave of fortune is created by a cluster of life lines that are particularly favourable to a specific individual. There is nothing the alternatives space does not contain including such golden veins. If you arrive at an outer line of this form of irregularity and experience some form of good luck you can slide onto other lines within the same cluster by inertia and consequently other fortuitous circumstances will follow on from the first. However, if you experience a bit of a bad patch after the first stroke of luck it means that a destructive pendulum has

latched onto you and lead you away from the wave of good fortune.

Choice

Transurfing proposes a fundamentally different approach to achieving one's goals. According to this approach a person makes an order as they would in a restaurant without any consideration for the means of achieving the goal. As a result the goal is realised to a large part of its own accord independently of the direct actions of the customer. Desires are not fulfilled; dreams do not come true. Yet your choice is an immutable law and will inevitably be realised. It would be impossible to explain the essence of choice in just a couple of words. Transurfing is basically all about what choice is and how to actually make choices.

Unity of heart and mind

Will is inherent to the mind and yet despite this fact the mind cannot control outer intention. The heart on the other hand is capable of identifying with outer intention and yet it is not endowed with the power of the will. The heart flies around the alternatives space like an uncontrolled kite. In order to bring outer intention in line with your will you have to achieve *unity of heart and mind*. In this state the feelings of the heart and the thoughts of the mind are as one. For example, when a person is filled with joyful inspiration the heart “sings” and the mind “rubs its hands in glee”. In this state a person is capable of being highly creative. It can also be the case that the heart and mind find agreement in emotions such as anxiety, fear and non-acceptance. This is when our worst expectations are realised. Finally, when common sense insists on one thing and the heart resists there is discord between the heart and mind.

Guardian's Riddle

“Everyone can have the freedom to choose whatever they want. How can such freedom be obtained?” People do not realise that they do not have to struggle for what they want and can simply *have* it. It sounds very unlikely but nonetheless it is true. The key to the riddle can be found by reading *Transurfing Reality* in its entirety. You will not understand the solution to the riddle fully if you peek at the last chapter without reading the previous chapters.

Signs

Guiding signs are signs that indicate a forthcoming turn in the alternatives flow. If something is approaching that could have a substantial impact on the future course of events then a sign appears to signal it. When the alternatives

flow takes a new turn a person shifts onto a different life line. Each line is more or less uniform in quality. The stream of the alternatives flow can transect various lines which differ from one another in the parameters of their conditions. Change may be fairly insignificant but the difference can be felt nonetheless. This type of qualitative change is experienced either consciously or subconsciously as a sense that something is not quite right.

Guiding signs only appear at the onset of a shift to new life lines. Not all individual phenomena catch our attention. For example, a crow caws. If you do not notice any qualitative difference in this event it means that you are still on the former life line. If however, there is something about it that alerts you for some reason then it should be taken to represent a sign. A sign can be distinguished from more ordinary phenomena in that it signals the start of a transition to a very new type of life line.

Excess potential

Excess potential represents tension, a localised disturbance in an otherwise stable energy field. The irregularity is created by thought energy when an object is attributed excessive and disproportionate meaning. Desire represents an example of excess potential because it strives to draw the object of attraction to a place where it is not naturally present. The desperate desire to have something you lack creates an energetic “differential in pressure” which drums up the winds of balanced forces. Other examples of excess potential include: dissatisfaction, blame, admiration, worship, idealisation, over-evaluation, contempt, vanity, and likewise feelings of superiority, inferiority and guilt.

Induced shift

Catastrophes, natural disasters, armed conflicts and economic crises all develop in spiral fashion. First there is the germ of the event, then its development. Tension rises until things reach a culmination with emotions spilling all over the place. Finally the accumulated energy is released into the atmosphere before a temporary ensuing calm. A whirlpool functions in relatively the same manner.

A pendulum catches the attention of a whole group of people in its *noose* and begins to sway with increasing force drawing people after it onto calamitous life lines. The individual responds to the pendulum’s first push by for example reacting to the negative event, taking part in the confusion and thereby entering the spiral’s impact zone which turns and pulls like a vortex.

The phenomenon of the pull into the vortex is defines as an induced transition

onto a life line in which the individual takes on the role of victim. The individual's response to the pendulum's push and the consequent mutual exchange of energy induces a transition into a life line similar in frequency to the oscillations of the pendulum. As a result the negative event becomes a part of the layer of that individual's world.

Coordination of importance

Do not attribute excessive meaning to *anything*. Your importance energy is beneficial to the pendulum but not to you. Pendulums control people like puppets with the *strings of importance*. People are afraid to let go of the strings of importance because they are under the power of dependence which creates an illusion of support and confidence.

Confidence represents the same kind of excess potential as insecurity; it is just the opposite polarity. Awareness and intention equip you to stay out of the pendulum's game and get what you want with having to battle for it. When you are free from the battle you do not need confidence. If I am free from importance I have nothing to defend and nothing to conquer. I just go ahead and calmly make my choices.

To become free of pendulums you have to abandon inner and outer intention. Problems and obstacles appear on the path towards the goal because of the excess potential of importance. Obstacles are built on the foundation of importance. If importance is reduced the obstacles will crumble and cease to pose a problem.

Coordination of intention

The fact that people who have a tendency towards negativity see their worst expectations realised proves that people are capable of influencing the course of events in their life. Every event on a specific life line has two *branches* extending from it; one favourable, the other unfavourable. Every time you encounter an event you make a choice about your relationship to it. If you choose to see an event as positive you find yourself on the favourable branch of the life line. However, a tendency for negativity makes you express dissatisfaction and choose the unfavourable branch.

As soon as something disappoints you something else equally as disappointing follows soon after. This is why we say that "misfortune never comes alone". However, the chain of misfortunate events does not follow on from the first event but from your relationship to it. The pattern is created by the choice you make when you stand at the fork in the life line. If you analyse how inclined you

are to think negatively you will have a good idea of where a series of negative branches on the life line has led through over the course of your life.

The principle of the coordination of intention can be expressed in the following manner: *If you decide to perceive seemingly negative changes in the scenario as positive then that is how things will be.* By following this principle you can achieve the same success in the positive as the negativists achieve in realising their worst expectations.

Life line

A person's life just like any other example of matter in motion represents a chain of cause and effect. In the alternatives space effect is always located close to the cause. Just as one effect follows another sectors that are in close proximity in the alternatives space are organised into life lines. The scripts and sets of scenery on one life line are more or less uniform in quality. A person's life unfolds fairly stably along a given life line until an event occurs that substantially changes the script and scenery. At that point fate takes a turn and shifts into a different life line. You are always on a life line that corresponds in its parameters to your thought energy. By adjusting your relationship to the world, *i.e.* your mental image, you shift onto a different life line in which potential events can unfold in different ways.

Material realisation

Under certain conditions the information structure of the alternatives space can materialise. Any thought like any sector in the field has certain parameters. When thought energy is transmitted it "illuminates" the corresponding sector of the field and realises that specific alternatives of possible physical realities. Therefore, thoughts have a direct impact on the course of events.

The alternatives space serves as a template. It determines the form and trajectory of the movement dynamics of matter. The potential for material realisation moves in time and space whilst the alternatives themselves remain in a specific space for eternity. Every living being creates the layer of their individual world via the transmission of thought energy. Numerous living organisms inhabit our world and every single one of them contributes to the shaping of reality.

Pendulum

Thought energy is material and does not totally disappear without trace. When a group of people begin to think in a similar way their "thought waves"

accumulate in layers and invisible but real energy-information structures – pendulums are created in the greater ocean of energy. The structures begin to evolve independently until they reach a stage at which they are able to subject people to their own laws. When a person comes under the influence of a destructive pendulum they lose their freedom and are forced to become a small cog in a large machine.

The more people – adherents – feed the pendulum with their energy, the more forceful its “sway”. Every pendulum has its characteristic oscillation frequency. For example, a swing will gain height only if you apply effort to pushing it with a certain frequency. This is what is meant by the resonant frequency. If the number of a pendulum’s adherents decreases its sway becomes weaker. If the number of adherents declines to zero the pendulum dies and ceases to exist as a separate entity.

In order to pump energy from people a pendulum hooks into their emotions and reactions: indignation, dissatisfaction, hate, irritation, anxiety, worry, depression, confusion, despair, fear, pity, attachment, admiration, tenderness, idealisation, adulation, delight, disappointment, pride, arrogance, contempt, aversion, insult, duty, guilt *etc.*

The greatest threat of the pendulum’s suppressive influence is that it leads its victim away from life lines in which that person would have been truly happy. It is essential to free oneself from imposed goals after which one battles straying ever further from one’s own true path in life.

In essence the pendulum is an “egregore” and yet it is much more than this. The notion of the “egregore” does not reflect the entire range of subtle interaction between the individual and the energy-information structures referred to here as pendulums.

Intention

Intention can be roughly defined as the *resolve to have and act*. Intention is realised. Desire is not. You may desire to put your hand up. The desire is shaped in your thoughts and you become aware that you wish to put your hand up. Is it the desire that actually raises the arm in the end? No. Of itself desire does not generate any physical action. The arm is only finally raised when the thought has been processed leaving just the resolve to take action. So it is the resolve to act that lifts the arm? Once again, no. You may have decided that you will lift up your arm but it will not yet be moved. So what exactly is it then that causes you to put up your hand? How do you define what lies beyond resolve?

Here the mind is powerless to provide an intelligible explanation for what intention really is. Our definition of intention as the resolve to have and act demonstrates the prelude to the force that actually manifests the action. All we can do is state the fact that the arm is lifted neither by desire nor by decision but by something we are referring to as intention.

Intention is divided into two kinds: *inner* and *outer*. Inner intention presupposes active impact on the world around us. This is the *resolve to act*. Outer intention is the *resolve to have* which causes the world to fulfil the individual's will. Inner intention is the concentration of one's attention on the process of moving towards one's goal. Outer intention is the concentration of attention on the process of how the goal realises itself. Inner intention causes the goal to be *achieved*, whereas outer intention allows it to be *chosen*. Everything that is associated with magic and paranormal phenomena relates to the areas of outer intention. Everything that can be reached within the context of the ordinary worldview is achieved by the power of inner intention.

Dependent relationships

Dependent relationships are defined by a statement of conditions such as: "If you do this then I will do this". "If you love me you would drop everything and come to the edge of the world with me. If you do not want to marry me you obviously do not love me. If you praise me I will be friends with you. If you do not give me your spade I will drive you out of the sandpit."

When love is transformed into a dependent relationship *polarisation* occurs and balance is destroyed. Unconditional love is love with the right to possess and admiration without adulation. In other words, this feeling does not create dependent relationships between the one who loves and the object of their love.

Balance is destroyed when one thing is compared or juxtaposed to another. "We are like this and they are different!" For example, national pride: in comparison to which nations? A feeling of inferiority or pride in oneself: in comparison to whom?

Where there is contradistinction balanced forces will inevitably get involved. The action of balanced forces is either aimed at dragging the subjects of contradiction apart or at bringing them together in mutual agreement or in collision. If you are the one who created the polarisation then in the majority of cases the impact of balanced forces will work against you.

Polarisation

Excess potential arises when certain qualities are attributed excess meaning.

Dependent relationships are formed between people when they begin to compare themselves and place conditions upon each other such as each other, such as “If you do this then I will do this.” Of itself excess potential is not necessarily a problem while the distorted evaluation exists irrelatively, on its own. However, the moment that the artificially inflated evaluation of one object is placed into a relative relationship with another object *polarisation* occurs, which calls forth the *wind of balanced forces*. Balanced forces strive to eliminate polarisation and their action is usually aimed against the person responsible for creating the polarisation in the first place.

Alternatives space

The alternatives space represents an *information structure*. It is an infinite information field containing all the alternatives of all possible events. You could say that the alternatives space contains everything that ever was and everything that ever will be. The alternatives space serves as a template and coordinates grid for the movement of matter through space and time. Both the future and the past are held in a constant position as if on a film roll. The effect of time is only created as a result of the movement of a single frame in which the present is lit up.

The world simultaneously exists in two forms: physical reality that can be touched and the metaphysical alternatives space which lies beyond the realms of perception and yet whose existence is no less objective. In principle the information field can be accessed. Intuitive knowledge and clairvoyance are sourced in the alternative space. The mind is not capable of creating anything fundamentally new. It can only create a new version of a house from old bricks. The mind does not store information so much as a kind of address to the information which is contained in the alternatives space. All scientific discoveries and masterpieces are sourced by the mind from the alternatives space via the heart.

Dreams are not illusions in the normal sense of the word. The mind does not imagine its dreams it genuinely sees them. Everything we see in physical reality represents a realised alternative. In dreams we are capable of seeing things that have not been realised, that is plays with virtual scenarios and sets of scenery. Dreams show us what could have taken place in the past and what could potentially take place in the future. Dreaming is the journeying of the soul through the alternatives space.

Balanced forces

Wherever excess potential is present balanced forces appear aimed to eliminate it. Potential is created by human thought energy when excess meaning is ascribed to a particular object.

Compare these two situations: you are standing on the floor in your house or you are standing at the edge of a precipice. In the first case there is nothing to worry about. In the second the situation has great meaning: if you make one careless movement the situation would be fatal. On an energetic level that fact of standing has the same meaning in the first situation as it does in the second. But when you are standing above a precipice your fear pumps up the tension creating an irregularity in the energy field. Balanced forces arise as a result aimed at eliminating the heterogeneity. You can actually feel their impact. On the one hand an inexplicable force pulls you downwards and on the other hand it draws you to take a step backwards away from the edge. In order to eliminate the excess potential of your fear the balanced forces will either have to drag you away from the edge or throw you downwards and be done with it. It is their influence that you sense.

The action of balanced forces in eliminating excess potential generates the majority of the problems people face. The intrigue is that a person often gets a result directly opposite to what they originally intended. At the same time there is no clear reason why this should be. This is what makes us feel that some inexplicable dark force is at play, similar to “sod’s law”.

Sector of the alternatives space

A specific *alternative* of any given event exists at every point of the alternatives space. For the sake of clarity we will assume that the alternative consists of *scripts* and *scenery*. Scenery represents the external view of form of a phenomenon whereas the script is the path along which matter moves. For convenience sake the alternatives space can be divided into sectors, every sector endowed with scripts and scenery. The greater the distance between sectors the greater the difference in scripts and scenery. Each person’s fate is also represented by a multitude of alternatives. Theoretically, there are no limits to the number of possible turns of fate in a person’s life because the alternatives space is infinite.

Slide

Our perceptions of ourselves and our environment are often far from the truth. The distortion is caused by *slides*. For example, you are worried about certain personal shortcomings that cause you to experience a feeling of inferiority

because you think that others dislike and disapprove of them too. When you are interacting with people you insert an inferiority complex slide into your “projector” which causes you to see things in a distorted light.

The slide is a distorted picture of reality that exists in your mind. As a rule a negative slide is generated by *unity of heart and mind* which is why it is manifested into physical reality. Our worst expectations tend to come true. Negative slides can be transformed into positive slides and forced to work for you. If you intentionally create a positive slide it is capable of miraculously transforming the layer of your world. A target slide is a mental picture of the goal as if it had already been reached. The systematic visualisation of the slide leads to the materialisation of the corresponding sector in the alternatives space.

World layer

Every living being materialises a given sector of the alternatives space with their thought energy and thereby creates the layer of their world. All these layers lie one on top of the other and in this way every living being contributes to the shaping of reality.

The individual creates the layer of their personal world, their separate reality with their mental outlook. This reality acquires a certain hue depending on that person’s attitudes. Metaphorically speaking, certain “weather conditions” are set: morning freshness in the sunshine or cloudy and raining. Sometimes a hurricane whips wildly or there might even be a natural catastrophe.

Individual reality is created by two means: physical and metaphysical. In other words, a person builds their world with their thoughts and actions. Here thought forms play the leading role because they are responsible for creating a significant portion of the material problems a person has to battle with for a lot of the time. Transurfing deals exclusively with the metaphysical aspect.

Alternatives flow

In the alternatives space information is static, like in a matrix. The information structure is organised in interconnected chains. The *alternatives flow* is generated by causal relationships.

The restless mind constantly experiences the tremors of pendulums and decides to solve all its problems in an attempt to keep the situation under control. In the majority of cases the mind’s wilful decisions are no more useful than pointlessly slapping your hands about in the water. Most problems, particularly minor ones, resolve themselves if you do not hinder the alternatives flow.

The main reason one should not actively resist the flow is because doing so a

huge amount of energy is wasted either in vain or to one's detriment. The flow takes the path of least resistance and so it contains the most rational and efficient solution to a problem. Resisting the flow on the contrary generates a mass of new problems.

A powerful intellect is of no purpose if the solution already exists in the alternatives space. If you do not get involved in the refinements and let the alternatives flow take its course the solution and what is more an optimal solution will present itself. Optimality is an inherent part of the structure of the information field. The alternatives space contains everything but it is most likely that the least energy-consuming alternative is the one that will ultimately be materialised. Nature never wastes energy.

Transurfing

I did not invent the word *Transurfing*. It just came to me from out of nowhere just like all the other terms and content of this book. It was a while until I came to understand its meaning. It is not even entirely clear how to explain the associations linked with it. The meaning of Transurfing can be interpreted as “gliding through the alternatives space”, or “transforming potential alternatives into reality” or “shifting across life lines”. Generally speaking though, if you practice Transurfing you are balancing on a wave of fortune. The word is pronounced Transerfing in the same way as it is spelled. If the reader prefers to pronounce it in the English manner – be my guest, but bear in mind that the sound “yo” does not exist in the English language.

Frailing

Frailing is an effective technique that can be applied to interpersonal relationships and it represents an integral part of Transurfing. The most important principle of Frailing can be expressed in the following manner. *Abandon the intention to get and replace it with the intention to give and you will receive the very thing you let go of.*

The action of this principle is based on the fact that your inner intention uses the inner intention of your partner without compromising their interests. As a result you receive from that person the very thing you were unsuccessful in achieving by the ordinary methods of inner intention. If you follow this principle you will achieve impressive results in personal and professional forms of communication.

Goals and doors

Everyone has their own true path in life that will bring them true happiness. Pendulums impose false goals on people that tempt them with the prospects of prestige and their seeming inaccessibility. By chasing after false goals you will either achieve nothing or you will achieve the goal only to discover that you did not really want it after all.

Your goal will transform your life into a celebration. The process of achieving your innermost goal will bring about the fulfilment of all your other wishes and the results will exceed all expectation. A person's door represents the particular path that will lead them to their innermost goal.

If you head towards your own goal through your own door no-one and nothing can stop you because the key of your soul fits the lock to your path. No-one can take from you what is truly yours. There should not be any problem therefore in achieving your innermost goal. The only potential problem lies in finding your goal and your door. Transuring will give you the tools to do this.
